Practicals 5 to 8

I have done some modifications in all the code according to my system, the results are same. If code from SQTA Practical pdf is not working we can use these codes.

Note: - we need to first start selenium server like practical 9, No need to create openvpath if already created.

Practical 5

```
package Practical_5;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.firefox.FirefoxDriver;

public class test2 {

    public static void main(String[] args) throws InterruptedException
    {
        System.setProperty("webdriver.gecko.driver", "E:\\TY.CS\\SQTA
Practicals\\geckodriver\\geckodriver.exe");
        WebDriver driver = new FirefoxDriver();
        driver.get("https://www.facebook.com/");
        driver.manage().window().maximize();
        driver.quit();
    }
}
```

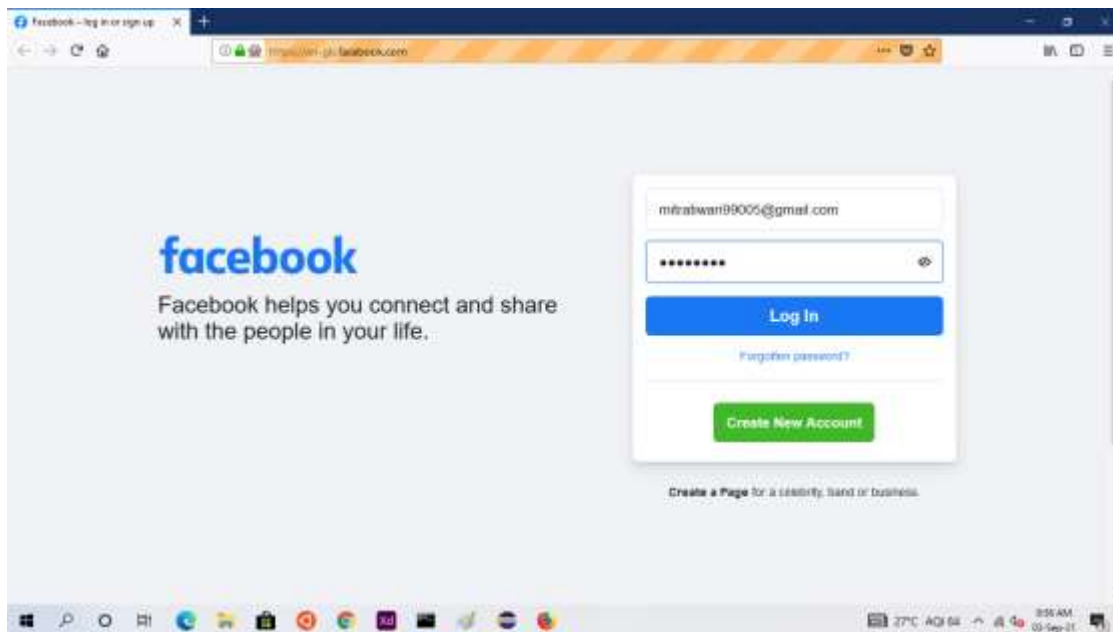

Practical 6

```
package Practical_6;

import org.openqa.selenium.By;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.firefox.FirefoxDriver;

public class test3 {
    public static void main(String[] args) throws Exception
    {
        System.setProperty("webdriver.gecko.driver", "E:\\TY.CS\\SQTA
        Practicals\\geckodriver\\geckodriver.exe");
        WebDriver driver = new FirefoxDriver();
        driver.get("https://en-gb.facebook.com/");
        driver.manage().window().maximize();
        driver.findElement(By.id("email")).sendKeys("youremailid@gmail.com");
        driver.findElement(By.id("pass")).sendKeys("password");
        driver.findElement(By.name("login")).click();
        driver.quit();
    }
}
```

Practical 7

```
package Practical_7;

import org.openqa.selenium.By;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.WebElement;
import org.openqa.selenium.firefox.FirefoxDriver;

public class test2 {

    public static void main(String[] args)
    {

        System.setProperty("webdriver.gecko.driver","E:\\TY.CS\\SQTA
Practicals\\geckodriver\\geckodriver.exe");

        WebDriver driver = new FirefoxDriver();

        driver.get("https://en-gb.facebook.com/");

        driver.manage().window().maximize();

        java.util.List<WebElement> links = driver.findElements(By.tagName("a"));

        System.out.println("Total links are"+links.size());

        for (int i = 0; i<links.size(); i=i+1)
        {

            System.out.println("Link "+ i + " Link name "+ links.get(i).getText());

        }

        driver.quit();

    }

}
```

```
